CRM Analytics Report

Financial Year 2026 · Period: January – May 2026

Generated:	31 May 2026 (IST)
Prepared by:	Jeyadev R.
Classification:	Internal – Confidential
Currency:	Indian Rupee (INR, <i>Rs.</i>)
Exchange Rate:	1 USD = <i>Rs.</i> 83.5

Clean Energy · Heat Pumps · Solar · HRV · EV Charging · Battery Storage
Yorkshire · Manchester · Birmingham · London · Edinburgh · Bristol

This report is generated from the ASPCV CRM system. Data as of 31 May 2026.

ABSTRACT

This report presents a comprehensive performance analysis of ASPCV (Aspiration Cleantech Ventures) for the period January–May 2026. The CRM system tracks the full sales pipeline across clean-energy product categories including Air Source Heat Pumps, Ground Source Heat Pumps, Solar Arrays, Heat Recovery Ventilation Units, EV Chargers, and Battery Storage Systems.

Key headline results: Revenue YTD of **Rs.3.9Cr**, exceeding aggregate target by **+12%**. Active pipeline stands at **Rs.6.2Cr** with a win rate of **22%**. The ASHP 8kW and GSHP 12kW product lines account for **57%** of total revenue.

The report is structured in six chapters, mirroring the academic internship report format: Introduction and Background, Literature / Market Context, Proposed Methodology (CRM pipeline), System Implementation (data), Results and Discussion, and Conclusion with strategic recommendations.

Revenue YTD	Pipeline	Win Rate	Deals Closed
Rs.3.9Cr	Rs.6.2Cr	22%	Rs.1.75Cr
+18% vs target	+12% vs Q4	All deals	This year

CHAPTER 1 Introduction

1.1 Background

Aspiration Cleantech Ventures (ASPCV) operates in the UK clean-energy installation market, delivering heat pump systems, solar arrays, heat recovery ventilation, EV chargers, and battery storage to residential and commercial clients. The business spans six key UK regions: Yorkshire, Manchester, Birmingham, London, Edinburgh, and Bristol.

This CRM report documents the complete sales and operational performance for FY2026 (January–May 2026), providing quantitative analysis across four dimensions: revenue attainment, pipeline health, product performance, and team effectiveness.

1.2 Problem Statement

Clean-energy sales cycles are long (avg. 32 days lead-to-close) and involve multiple stakeholders. Without systematic CRM tracking, ASPCV risks:

- Missed follow-ups during the critical Proposal → Negotiation transition (highest drop-off stage)
- Unequal territory coverage (Yorkshire overperforms, London at –3% growth)
- Product cross-sell opportunities missed (Smart Controller & EV Charger below target)
- Pipeline forecasting errors exceeding 30% per rep without quota tracking

1.3 Objectives

1. Track monthly revenue vs. target with variance and attainment %
2. Monitor pipeline health across five funnel stages (Lead In → Closed Won)
3. Measure product-level accuracy vs. revenue target
4. Evaluate sales rep forecast accuracy using MAPE methodology
5. Generate actionable regional and team-level recommendations

1.4 Scope

The study covers the following dimensions for the period 1 January 2026 – 31 May 2026:

- **Products:** ASHP 8kW, GSHP 12kW, HRV Unit, Battery 10kWh, Solar 10kWp, EV Charger, Smart Controller
- **Regions:** Yorkshire, Manchester, Birmingham, London, Edinburgh, Bristol
- **Team:** Sarah Mitchell, Tom Bradshaw, Oliver Grant, Liz Thornton, Fiona Clarke
- **Currency:** INR primary; USD conversion at $Rs.83.5 = \$1$

CHAPTER 2 Market Context

2.1 UK Clean Energy Market Overview

The UK heat pump market is growing at approximately 18% year-on-year, driven by the Government's Boiler Upgrade Scheme (BUS) which provides £7,500 grants for ASHP installations. ASPCV is positioned to capture this demand through its portfolio of air-source, ground-source, and hybrid systems.

2.2 Competitive Landscape

Key competitors in the UK market include British Gas Heat Pumps, Octopus Energy Heating, and Mitsubishi Ecodan installers. ASPCV differentiates through:

- Bundled solutions (ASHP + Solar + Battery + Smart Controller)
- Hyper-local installation teams across six regions
- Integrated CRM-driven follow-up reducing avg. close cycle from 45 to 32 days

2.3 Research Gaps Addressed by CRM

1. **Lack of Integrated Pipeline Visibility:** Proposal–Negotiation drop-off was previously unmeasured
2. **No Product-Level Accuracy Tracking:** Revenue vs. target was tracked at company level only
3. **Limited Rep Forecast Accuracy:** Quota attainment was not correlated with predicted deal counts
4. **Absent Regional Intelligence:** London decline was not identified until CRM geo-analysis

CHAPTER 3 Proposed Methodology

3.1 CRM Pipeline Architecture

The ASPCV CRM tracks the following sequential funnel:

$$\text{Lead In} \xrightarrow{60\%} \text{Qualified} \xrightarrow{58\%} \text{Proposal} \xrightarrow{60\%} \text{Negotiation} \xrightarrow{58\%} \text{Closed Won}$$

Overall lead-to-close conversion: **12%** (18 wins from 148 leads).

3.2 Ensemble Forecasting Logic

Revenue forecasting uses a weighted ensemble of two scenarios:

$$F_{\text{base}} = w_{\text{pipeline}} \cdot V_{\text{pipeline}} \cdot r_{\text{conversion}} + w_{\text{historical}} \cdot \bar{R}_{\text{monthly}}$$

where $r_{\text{conversion}} = 0.22$, $w_{\text{pipeline}} = 0.6$, $w_{\text{historical}} = 0.4$.

3.3 Product Accuracy Metric

Product revenue accuracy is defined analogously to MAPE:

$$\text{Accuracy}_p = 100 - \left| \frac{R_p^{\text{actual}} - R_p^{\text{target}}}{R_p^{\text{target}}} \times 100 \right|$$

3.4 Algorithms / Models Used

- **Pipeline Conversion Model:** Stage-by-stage Markov chain with historical conversion rates
- **Rep Forecast Model:** Quota-implied expected deals vs. actual; MAPE computed per rep
- **Retention Cohort Analysis:** Monthly cohort tracking M+0 through M+5
- **Geographic Growth Model:** YoY regional revenue growth rate

CHAPTER 4 System Implementation

4.1 Hardware and Software Specifications

4.1.1 CRM Stack

- **Frontend:** React 18 + TypeScript + Vite
- **Charts:** Recharts (AreaChart, BarChart, RadarChart, FunnelChart)
- **Backend:** Node.js + Express
- **Report Generator:** L^AT_EX + pgfplots (this document)

4.1.2 Tools / Libraries Used

Tool	Purpose
React + TypeScript	CRM frontend with typed data models
Recharts	Interactive charts (pipeline, revenue, funnel)
Lucide React	Icon library
L ^A T _E X + pgfplots	Report generation (this document)
Node.js / Express	REST API backend

4.2 Implementation Details

The CRM is modularised into pages: Dashboard, Leads, Accounts, Contacts, Deals, Projects, Support, Invoices, Reports, Calendar, Tasks, and Settings. Each page maintains its own state with shared currency context (INR/USD toggle).

The Reports page implements five analysis tabs (Overview, Sales, Pipeline, Team, Forecast), each containing dense data tables and interactive Recharts visualisations styled after academic report conventions.

CHAPTER 5 Results and Discussion

5.1 Monthly Revenue Performance Summary

Table 5.1: Monthly Revenue vs Target — Jan–Jun 2026 (Rs. INR)

Month	Target	Actual	Variance	Attainmen	Status
Jan 2026	Rs.66.8L	Rs.60.1L	−6.7L	90%	Near
Feb 2026	Rs.71.0L	Rs.76.0L	+5.0L	107%	On Target
Mar 2026	Rs.75.2L	Rs.73.5L	−1.7L	98%	Near
Apr 2026	Rs.79.3L	Rs.86.8L	+7.5L	109%	On Target
May 2026	Rs.83.5L	Rs.93.5L	+10.0L	112%	On Target
Jun 2026	Rs.87.7L	—	—	—	Pending
YTD Total	Rs.375.8L	Rs.389.9L	+14.1L	104%	On Target

Figure 5.1: Monthly Revenue vs Target (Jan–Jun 2026)

Figure 5.2: Pipeline Stage Count — Lead In to Closed Won

5.2 Experimental Results — 7-Day Activity Trends

Table 5.2: Weekly Activity Trends — Leads / Deals / Invoices (W1 = first week of May 2026)

Week	Leads In	Deals Closed	Invoices Paid	Lead → Deal %	Invoice Rate %
W1	18	4	3	22%	75%
W2	22	6	5	27%	83%
W3	19	5	4	26%	80%
W4	26	7	6	27%	86%
W5	24	6	5	25%	83%
W6	31	9	8	29%	89%
Total	140	37	31	+72% W1→W6	Avg 83%

Figure 5.3: Fig 5.1.3: Weekly Activity Trends — Leads / Deals / Invoices (W1–W6)

5.3 Performance Comparison — Product Accuracy

Table 5.3: Table 5.2.1: Product Revenue Accuracy vs Target

Product	Target	Actual	% Portfolio	vs Target	Accuracy
ASHP 8kW	Rs.3.0Cr	Rs.2.9Cr	29%	−3.5%	96.5%
GSHP 12kW	Rs.2.9Cr	Rs.2.8Cr	28%	−2.1%	97.9%
HRV Unit	Rs.1.8Cr	Rs.1.75Cr	18%	−2.5%	97.5%
Battery 10kWh	Rs.80.0L	Rs.76.8L	8%	−4.0%	96.0%
Solar 10kWp	Rs.70.0L	Rs.65.1L	7%	−7.0%	93.0%
EV Charger	Rs.55.0L	Rs.52.6L	5%	−4.4%	95.6%
Smart Controller	Rs.40.0L	Rs.37.6L	4%	−6.0%	94.0%
TOTAL	Rs.10.15Cr	Rs.9.77Cr	100%	−3.7%	Avg 95.8%

5.4 Rep Forecast Accuracy

Table 5.4: Table 5.2.2: Sales Rep Forecast Accuracy (MAPE Methodology)

Sales Rep	Expected	Actual	Abs Error	% Error	Accuracy
Sarah Mitchell	14	12	2	14%	86%
Tom Bradshaw	13	9	4	31%	69%
Oliver Grant	14	11	3	21%	79%
Liz Thornton	12	7	5	42%	58%
Fiona Clarke	11	5	6	55%	45%
Overall MAPE	—	—	—	32.6%	Avg 67%

5.5 Geographic Performance

Table 5.5: Revenue by UK Region — Jan–May 2026

Region	Leads	Deals	Revenue	Growth	Conversion
Yorkshire	42	18	Rs.2.45Cr	+14%	43%
Manchester	31	12	Rs.1.68Cr	+9%	39%
Birmingham	28	11	Rs.1.52Cr	+22%	39%
London	24	9	Rs.1.24Cr	−3%	38%
Edinburgh	18	6	Rs.89.0L	+31%	33%
Bristol	15	5	Rs.71.0L	+18%	33%
Total	158	61	Rs.8.19Cr	Avg +15%	39%

5.6 Interpretation and Analysis

5.6.1 Revenue Performance

Revenue YTD of Rs.3.9Cr outperforms the aggregate Jan–May target by +4%. The strongest months were April (+9%) and May (+12%), indicating accelerating momentum. January underperformed by −10%, likely attributable to post-holiday sales cycle lag.

5.6.2 Product Performance

The system achieved a high overall accuracy of **95.8%** for product revenue forecasting. ASHP 8kW (96.5%) and GSHP 12kW (97.9%) showed the highest accuracy, consistent with their established market demand. Solar 10kWp showed the lowest accuracy at 93%, reflecting variability in planning permission timelines.

5.6.3 Rep Forecast Performance

The mortality-equivalent metric — rep forecast accuracy — achieved an overall MAPE of **32.6%**, corresponding to a team accuracy of **67%**. As shown in Table 5.2.2, daily prediction error ranges from 14% (Sarah Mitchell, best performer) to 55% (Fiona Clarke, newest team member). This variability underscores the challenge of predicting deal counts for reps with shorter tenure and smaller deal volumes.

5.7 Discussion of Key Findings

The key finding is that the pipeline’s critical weakness is the **Proposal → Negotiation** transition, where 40% of deals are lost. This single stage represents the highest leverage point for pipeline improvement.

Yorkshire and Birmingham show double-digit growth, confirming regional strategy alignment. London at −3% is the only declining region and requires a dedicated review.

5.8 Limitations of Results

- **Variable Rep Accuracy:** Fiona Clarke and Liz Thornton show >40% error — low deal volumes make percentage-based metrics volatile
- **London Decline:** Root cause unconfirmed — may reflect market saturation, competitive pressure, or temporary seasonal effects
- **Forecast Horizon:** All projections assume current pipeline conversion rates hold; macro-economic shifts (energy price changes, grant policy) could alter outcomes
- **Data Coverage:** Jun 2026 not yet complete; full-year projection based on 5-month sample

CHAPTER 6 Conclusion and Future Work

6.1 Summary of the Research

This report successfully analysed ASPCV CRM performance for January–May 2026 using a methodology directly inspired by academic forecasting literature. The CRM system tracked the full clean-energy sales pipeline across seven product lines, five sales reps, and six UK regions.

Key results:

- Revenue YTD: *Rs.3.9Cr* (+4% vs target, +18% vs prior year run rate)
- Active pipeline: *Rs.6.2Cr* at a 22% conversion rate
- Product accuracy: 95.8% overall (SO2-equivalent best: GSHP 97.9%; worst: Solar 93%)
- Team forecast accuracy: 67% (comparable to the 66% mortality forecast in the internship report)
- Pipeline conversion from Lead to Closed Won: **12%**

6.2 Conclusion Drawn from the Results

The ensemble CRM pipeline is a reliable and effective operational tool. The product accuracy of 95.8% validates the quota-setting methodology. The team MAPE of 32.6% is consistent with industry benchmarks for complex B2B sales cycles. Yorkshire and Birmingham deliver disproportionate returns; Edinburgh shows the highest growth rate (+31%) and is underserved relative to its potential.

6.3 Contributions of the Study

- **Integrated Pipeline Visibility:** First end-to-end CRM report correlating lead volume, deal conversion, product accuracy, and rep forecast accuracy
- **Demonstrated MAPE Methodology:** Applied academic forecasting metrics (MAPE, accuracy %) to sales rep performance — a novel application for the clean-energy sector
- **Localised Health Assessment:** Hyper-local regional intelligence identifying London as at-risk and Edinburgh as high-opportunity
- **Automated Reporting:** This L^AT_EX PDF is generated directly from CRM data, replacing manual PowerPoint reports

6.4 Future Work

- **Improve Proposal Conversion:** Implement structured 48-hour follow-up cadence targeting the Proposal → Negotiation transition; target +15% improvement
- **Bundle Strategy:** Package Smart Controller and EV Charger as standard add-ons with ASHP/GSHP installs to lift attachment rate above 60%
- **Edinburgh Expansion:** Allocate additional sales capacity to Edinburgh — 31% growth with only 18 leads suggests underserved demand
- **London Strategy Review:** Conduct competitive analysis for Greater London; consider pricing adjustment or partner channel strategy
- **Advanced Forecasting:** Integrate Prophet + XGBoost ensemble (as per

internship project) for 7-day pipeline value forecasting per region

- **Real-Time Alerts:** Implement CRM alerts when deals stall at Proposal stage >14 days without activity
